

Delinea Privilege Access Management

Planning PAM

TECH WIN CYBER

1

Licensing

Determine some use cases that meet your organisations needs - this will establish what licensing needs are required for your deployment

2

Identity Sources

Identify your main source of identity. Entra ID, Active Directory and external providers can all manage identity. Understanding the identity source defines the deployment types

3

Who Are You Protecting?

Identifying highly privileged users that need protecting will allow you to fast track the onboarding process

4

Discover

Configuring discovery across your domains and machines allows your to identify and import identities which may be important to the organisation. You don't know what you don't know

5

Onboard

Importing credentials, onboarding privileged users and getting them used to the platform is important. These users should be comfortable using Delinea for all their access needs

6

Develop

Altering workflows, developing use cases, importing identities and managing the platform keeps the platforms hygiene clean

7

Centralise

Remove all other methods of access other than Delinea, completely centralising the platforms access. Control and audit all access in a single platform
